NEW ROLES
Collaborative design and a database for active roofs
Emile Quanjel, Ad den Otter & Wim Zeiler .................................................. 143

Towards a knowledge driven organization modeling knowledge creation and simulating sharing
Mahdi Hemati, M.A. van Houten & Ad den Otter ........................................ 155

Collaborative design in protospace 3.0
Hans Hubers .................................................................................................. 167

Public private partnerships in China’s infrastructure development: lessons learnt
Yongjian Ke, Shouqing Wang, & Albert P.C. Chan ...................................... 177

Modeling cost and qualities for understanding stakeholders expectations. Case Quayaquil – Ecuador
Alina Delgado & Frank De Troyer ................................................................. 189

The demonstration project as ‘tool’ for client driven innovation exploring the potential from a Swedish perspective
Paula Femenias, Anna Kadefors & Michael Edén ........................................ 199

Client identification with design and the architecture firm
Sofia Kioussi & Hedley Smyth ................................................................. 211

The changing role of AEC organisations toward integral design
Wim Zeiler, Perica Savanovic & Emile Quanjel ........................................ 223

Changing roles of architects, engineers and builders through BIM application in healthcare building projects in the Netherlands
Rizal Sebastian .............................................................................................. 235

Performability in a public private partnership
David de Rooij & Ben S. Kuijper ................................................................ 247

Architectural design quality: the practitioners perspective – an AHP based approach for assessment
Timur Harputlugil, A. Tanju Gultekin & Y. Ilker Topçu ................................ 259

Resident-groups taking over the role of professionals, our new hope in sustainable energy real-estate programs
Fred C. Sanders ........................................................................................... 269

Renewed and new emerging roles in construction
Mieke Oostra ................................................................................................. 285

Knowledge breakdown structure based on BPM for improving use of KMS
Minsuk Oh & Yoonki Choi ........................................................................... 297

Sustainability expensive? The costs of energetic sustainability transparent
Adri Proveniers, Wim Schaefer, Petra Rovers, Rob van den Berg & Danny van der Weerdt ...... 305

Framing fragmentation – the architect as a master of montage
Charlotte Bundgaard .................................................................................. 315
Sustainable district in Barcelona
Lluís Grau i Molist, Felipe Pich-Aguílara, Teresa Batlle, Jocelyne M. de Botton, Antonio Terrisse, Ole Thorson, Eduard Cot, Xavier Gabarrel, Joan Rieradevall, Ramón Farreny, Jordi Oliver-Sola, Enric Batlle, Pep Riera, Gonzalo Portabella, Pere Martínez, Mila Moskalenko ....................................... 325

The maintenance contractor as services innovator in performance-based partnerships
Ad Straub .............................................................................................................. 339

SUPPLY CHAIN INTEGRATION
Designing quality with a sustainable process
Ingrid Svetofi ........................................................................................................ 351

The role of facilities management in building projects
Per Anker Jensen, Torben Damgaard & Kristian Kristiansen .................................. 361

Are our buildings “fit” to resist incommensurable evolution?
Natalie Plagaro Cowee & Peter Schwehr .............................................................. 375

Cyclical system model – the context of contracting and modular systems
Jörg Lamster .......................................................................................................... 387

Super-charging supply chains – through ‘relational integration’ for overall value
Mohan, M. Kummaraswamy, Aaron M. Anvuur & Hedley J. Smyth ............................ 397

Recursive advancement of roles of stakeholders across eight competitive arenas as in (inter)national building sectors
Pekka Huovinen & Juhani Kivira .......................................................................... 409

The impact of BIM on the architectural practice and partnering in the building process
Dik Spekking, ErnstJan Cornelis & Aart van der Vlist ............................................. 421

ADAPTABLE FUTURES
Adaptable buildings: three non-residential case studies
Almudena Fuster, Alistair Gibb, Simon Austin, Katy Beadle & Peter Madden .................. 435

The new Japanese housing law to promote the longer life of housing and example of changes in the layout of public housing over 40 years in Japan
Kazunobu Minami .................................................................................................... 449

Integrated design solutions: what does this mean from an open building perspective
Stephen Kendall ....................................................................................................... 457

The impact of functional flexibility on minimizing housing obsolescence: a pilot study of urban house stock built around the millennium Chongqing, China
Ren Zhijie & Jia Beisi ............................................................................................. 465

Persistence and Change. Xochimilco: a man-made and natural environment dialogue
Jorge Andrade ......................................................................................................... 475

User involvement in the design process of multifunctional buildings
Kenzo Ogijvaar, M. Jovanovic & Ad den Otter ..................................................... 485
Bridging the past and future: the design mode and role of architects in open building practice
Beisi Jia .............................................................................................................. 497

Designing open building for social housing: limits and possibilities
Denise Morado Nascimento, Thais Mariano Nassif Salomão & Laine Hardy .......... 507

A paradigm shift towards whole life analysis in adaptable buildings
Anupa Manewa, Christine Pasquire, Alistair Gibb & Robert Schmidt III .......... 519

Investing in possibilities
Wiechert Schenk, Hilde Remoy & Peter de Jong .............................................. 529

Beyond estates strategy? Beyond master planning? Open planning for future healthcare environments
Phil Astley ............................................................................................................. 541

A case study of the educational process for architecture students – instruction on the open building concept
Yoko Sone & Makiko Taguchi ........................................................................... 549

Dynamic facilities development: a client perspective on adapting change
David Hanitchak & Malaina Bowker ................................................................ 557

Challenges in integrating green design with open building concept into base building architecture in Japan
Cheow Puei Kuen & Nishide Kazuhiko ............................................................... 571

Flexible housing types
Sigrid Loch .......................................................................................................... 583

Enhancement of constructability concept: an experience in offsite Malaysia construction industry
Mohd Nasrun Mohd Nawi, Kamarul Anuar Mohamad Kamar, Mohd Rodzi Abdullah, Ahmad Tarmizi Haron, Angela Lee & Mohammed Arif ................................................. 595

Dynamic facilities management to address change
David Hanitchak, Joan Saba & Aia Facha ............................................................ 607

Building costs for converting office buildings, understanding building costs by modelling
Roderik Mackay, Hilde Remoy & Peter de Jong ................................................ 619

Open building and the role of craftsmanship in ancient China – a historical literature interpretation of construction
Jian Yingying & Jia Beisi .................................................................................... 633

A cradle to cradle (C2C) decision support model for the development of mixed functional areas
Adrie Provencers, Bauke de Vries, Dennie Collas, Bart Advokaat & Ingrid Nieuwenhuijzen ................................................................. 645

AUTHORS INDEX ................................................................................................. 655

KEYWORDS INDEX ............................................................................................ 657
PERSISTENCE AND CHANGE. XOCHIMILCO: A MAN-MADE AND NATURAL ENVIRONMENT DIALOGUE

Abstract
This paper is about incremental housing in developing societies. This work is being carried out with inhabitants, students and teachers working on education for open architecture. Since 1950, Mexico City’s growth has taken place mainly through peripheral, low-income settlements called colonias populares, and the growth and integration of all traditional towns which have become part of the main city. (Bazant 2001)

As in many other parts of the world, new ways of life and housing production are being over-imposed on the existing ones. Unfortunately this happens most of the time, regardless of the values and relevant elements of the traditional life styles.

Mexico, as many other countries, is in the middle of a process where tradition and innovation are in constant confrontation.

Not only do the new generations of architects have to face these contradictions, but they also have to come up with proposals which are not considered final projects. These projects must be dynamic and incrementally upgraded ones, where changes of all elements: spaces, materials and inhabitants, interrelate and become the main goal.

San Luis Tlaxialtemalco, a small peasant’s town founded at the beginning of XVII century and located at the border of Xochimilco lake, has been, since September 2007, our object of study at the Taller de Vivienda Housing Workshop Study in our university. Our main goal is to find a way of preserving this valuable way of life, as well as understanding and improving on it, the changes needed according to our times and technological advances.

Trough a small a scale reconstruction and documentation of dwelling units, transformation along with their inhabitant’s dynamic of growth, we try first of all, to understand and sustain a change process. This is in order to define what has to be either preserved or modifies, in the never-ending relationship between architecture and its cultural and natural context.

Keywords: open building, urban growth, dwelling transformation, persistence and change

INTRODUCTION

This document is an advance of a research work which has been developed in the Low-Income Housing Workshop of the Universidad Autónoma Metropolitana, Unidad Xochimilco.

It is through the modular system of teaching and learning of our university, that since 1975 we have been doing both research work and social service.
